

Help reduce air pollution, traffic congestion, and mitigate climate change by counting cars with the Hestia Traffic App

WHAT IS HESTIA

A cutting-edge modeling system that offers accurate estimates of fossil fuel CO2 emissions, air quality, and human-generated heat, all at high precision in space and time. Hestia provides actionable data to cities and transportation agencies to improve congestion, optimize public transport, and reduce emissions.

Hestia Traffic App

We're working to improve the accuracy of on-road emission estimates in Hestia. To achieve this, we've introduced a user-friendly, community science app to gather more accurate and detailed data about traffic emissions in urban areas.

Download Today!!

Once downloaded, watch the training video and follow instructions to conduct 5 minute traffic counts at the locations indicated.
